# The promise of Business Intelligence

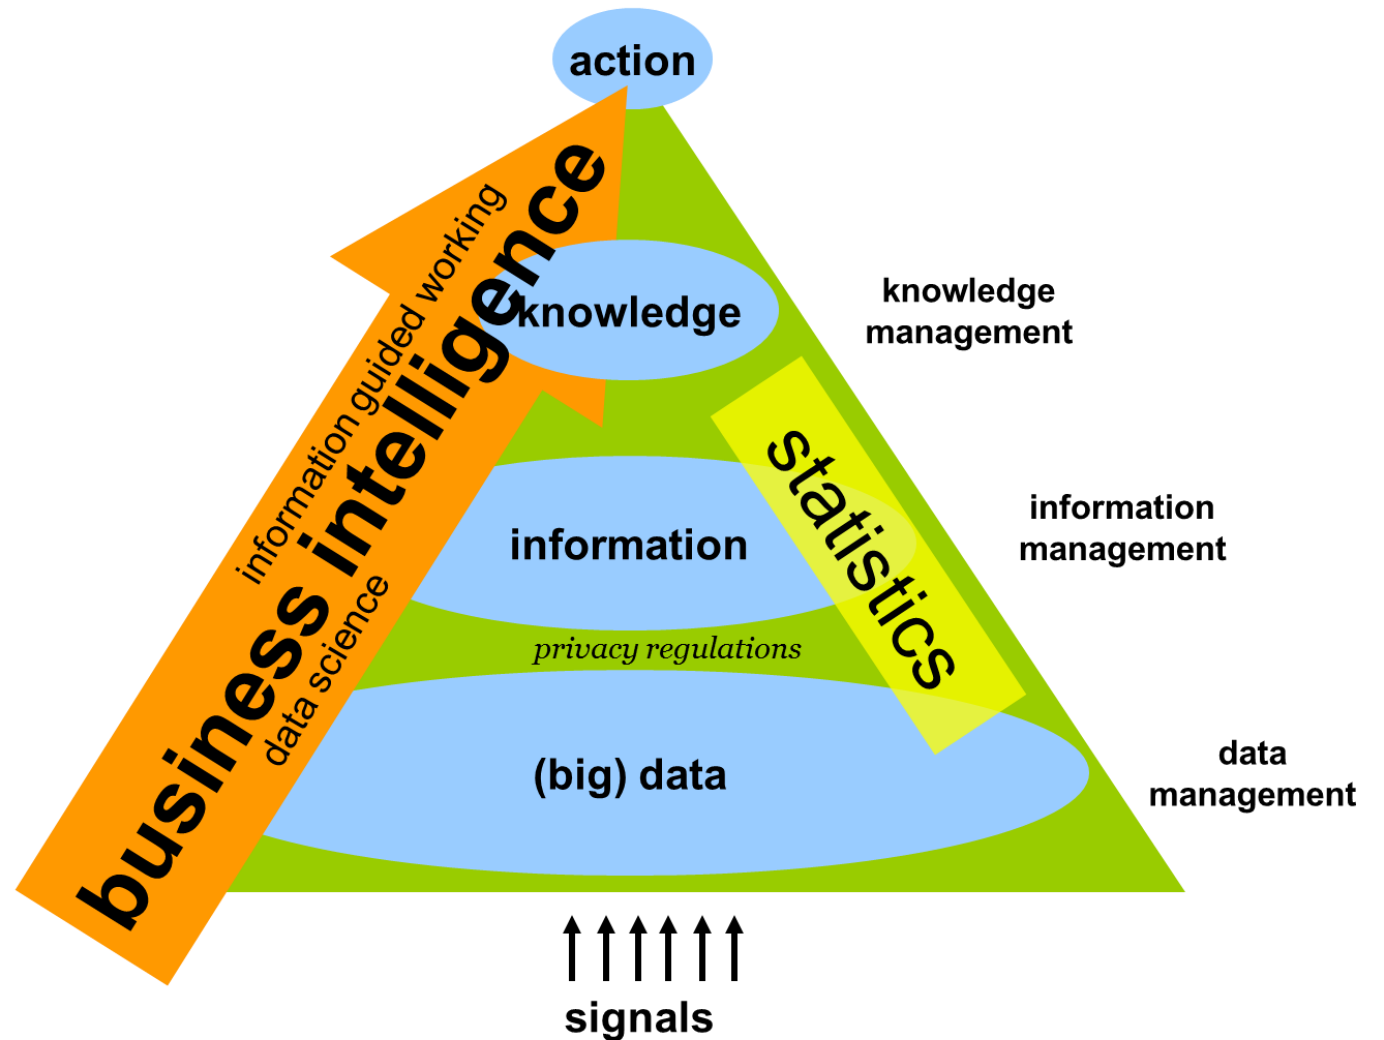

**If they collect data at all**

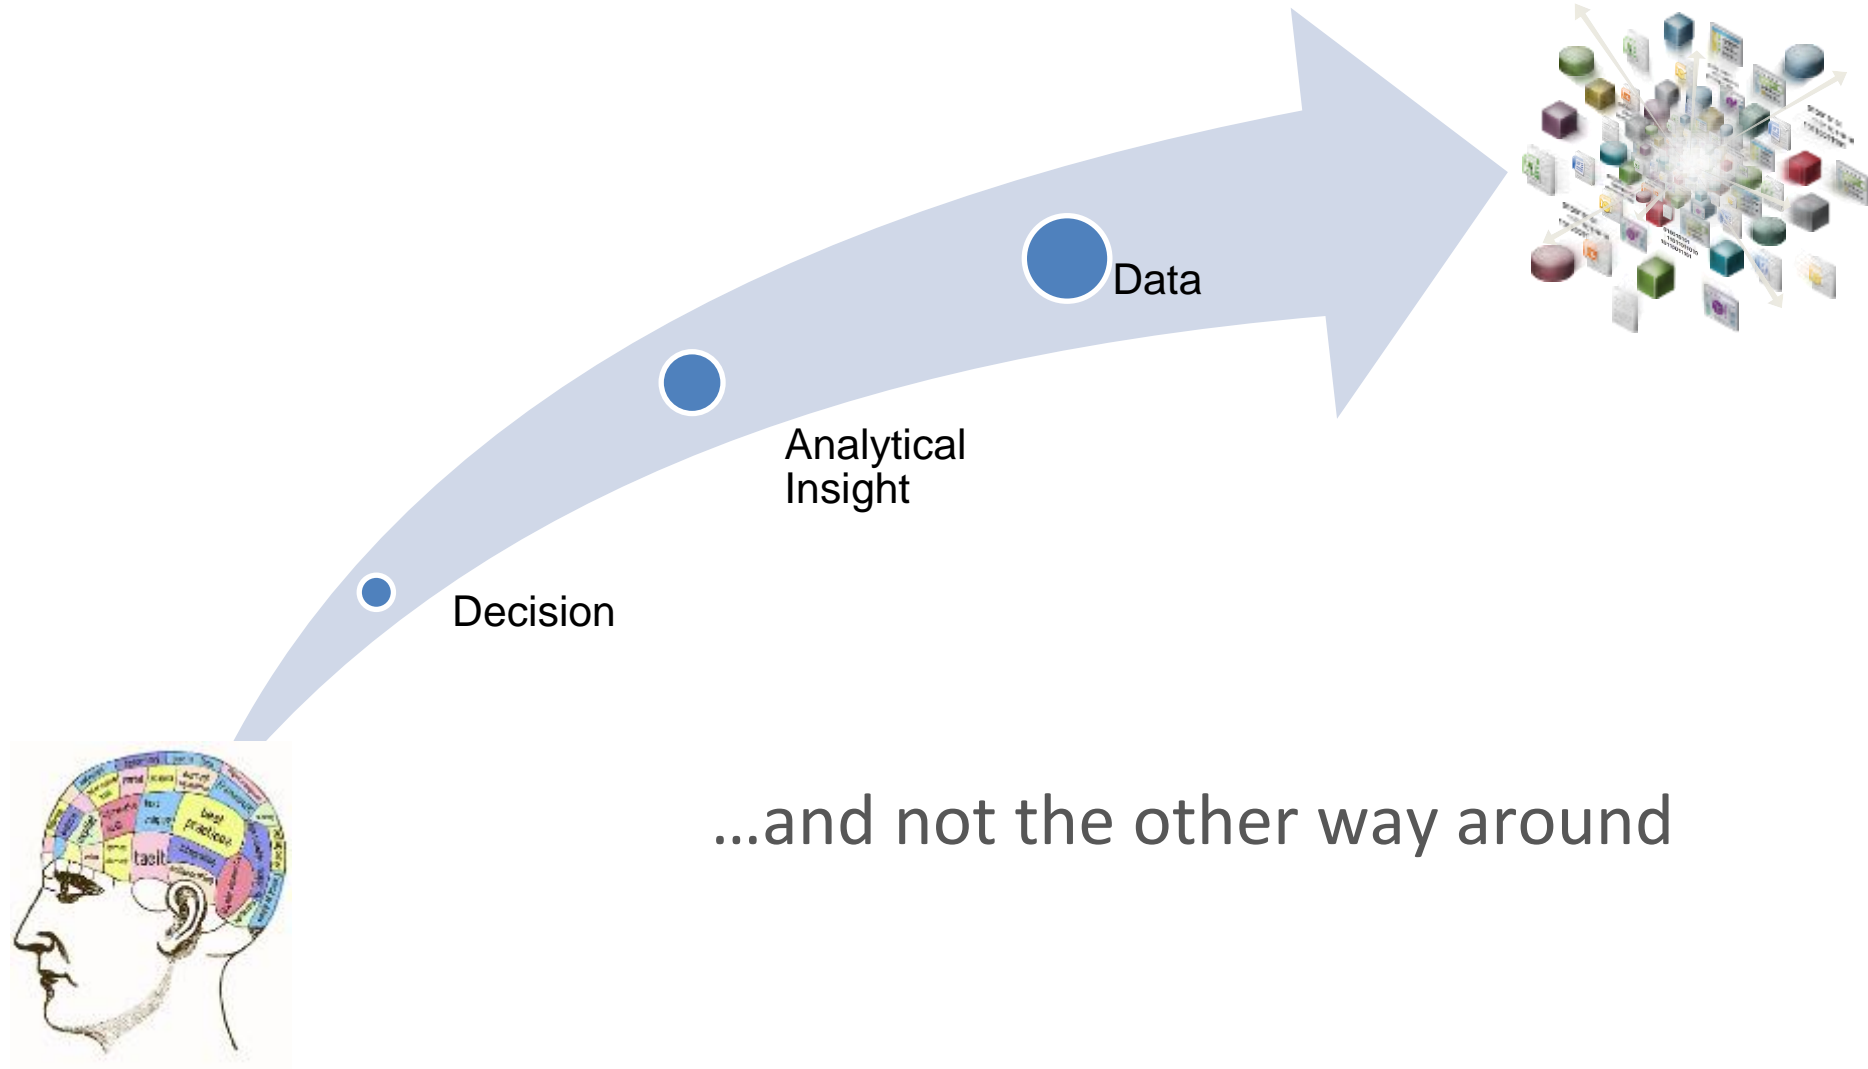

**Business Intelligence (BI) is the continuing process in which organizations collect, store and analyze data in a specific way in order to apply the resulting information and knowledge in decision making processes to improve the performance of the organization**

strategic management    change management    innovation management

# From decision to data

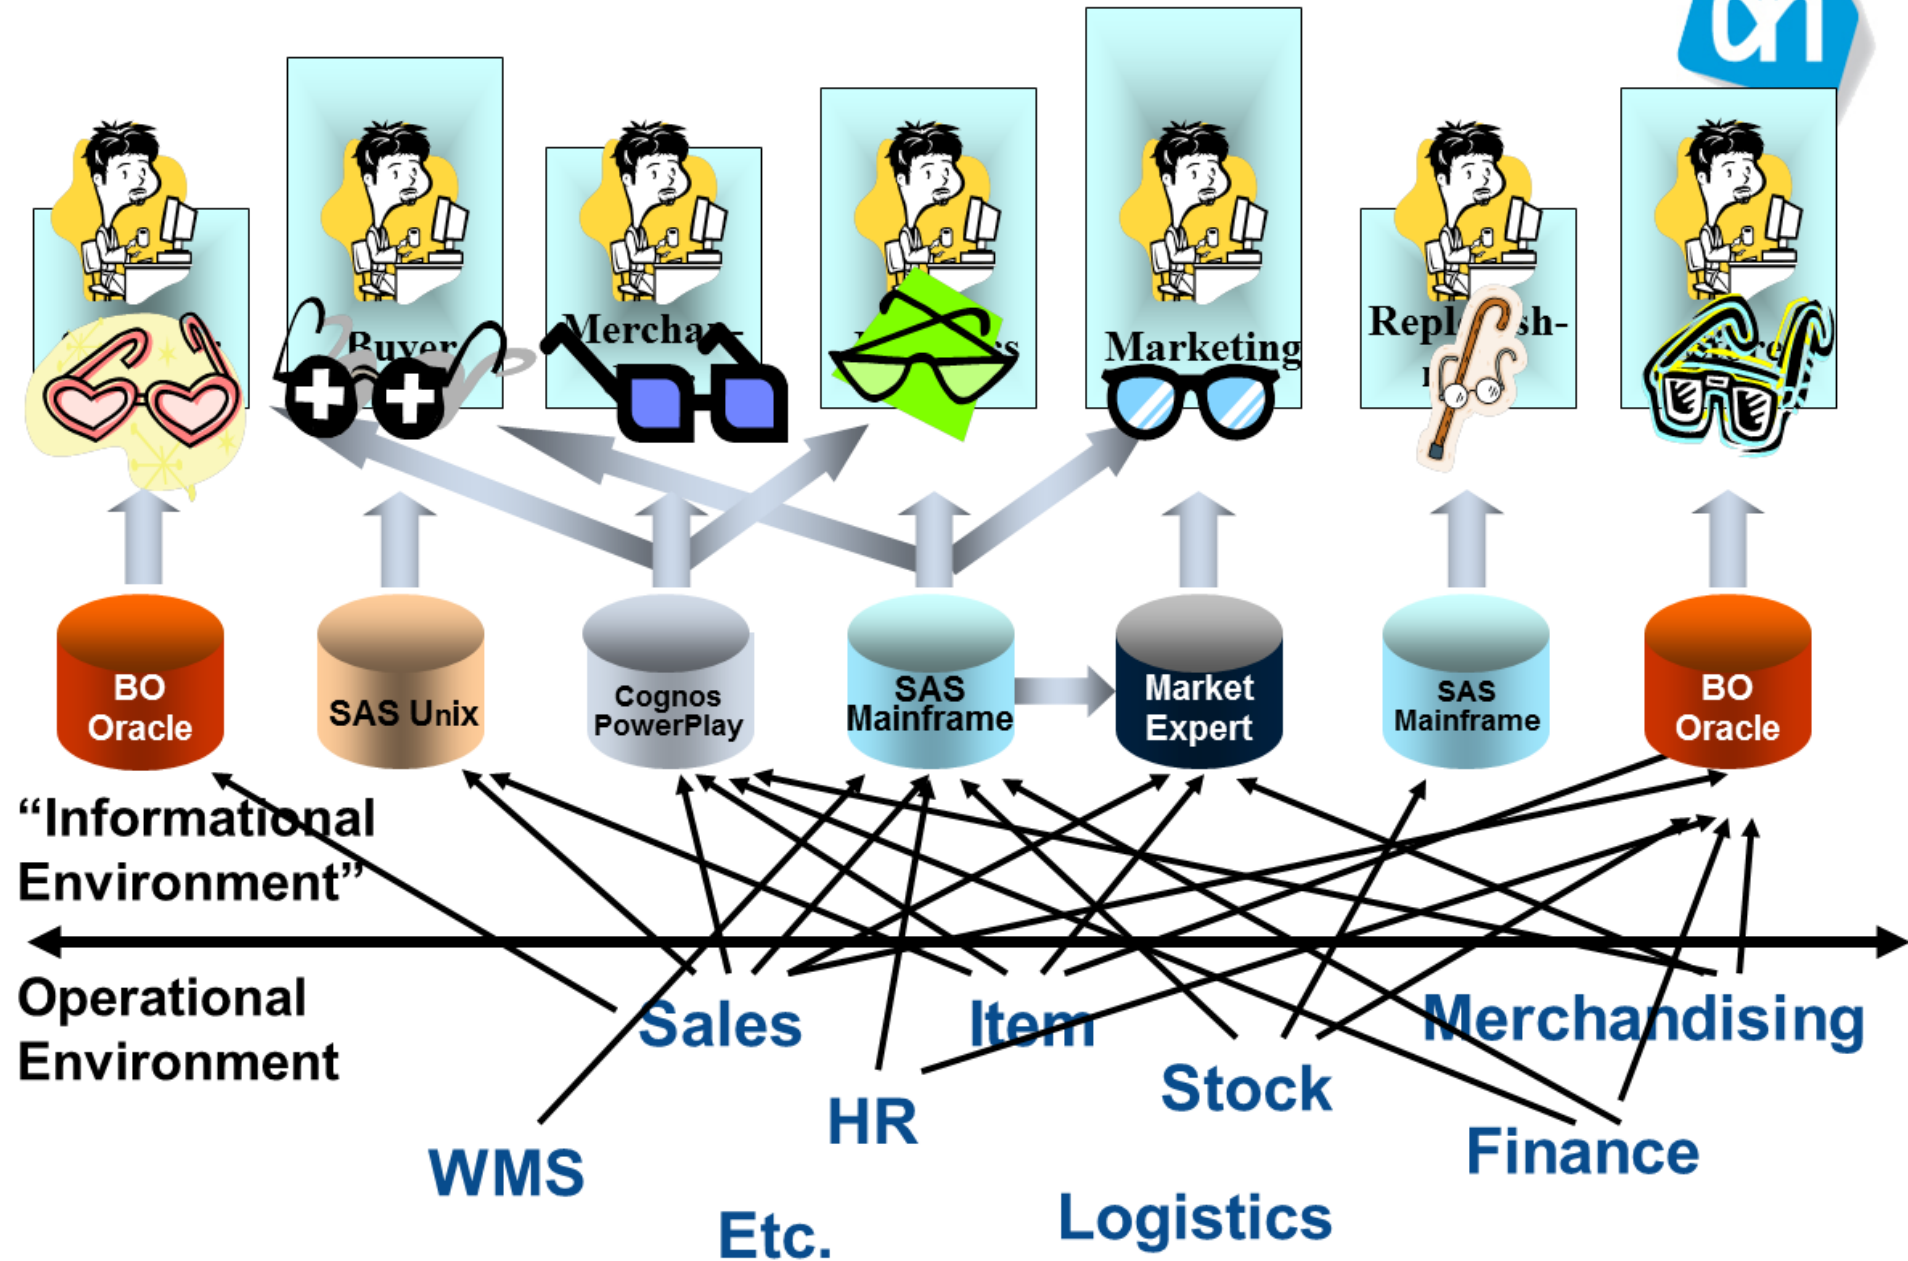

**“Data-driven decisions tend to be better decisions. Leaders will either embrace this fact or be replaced by others who do”**

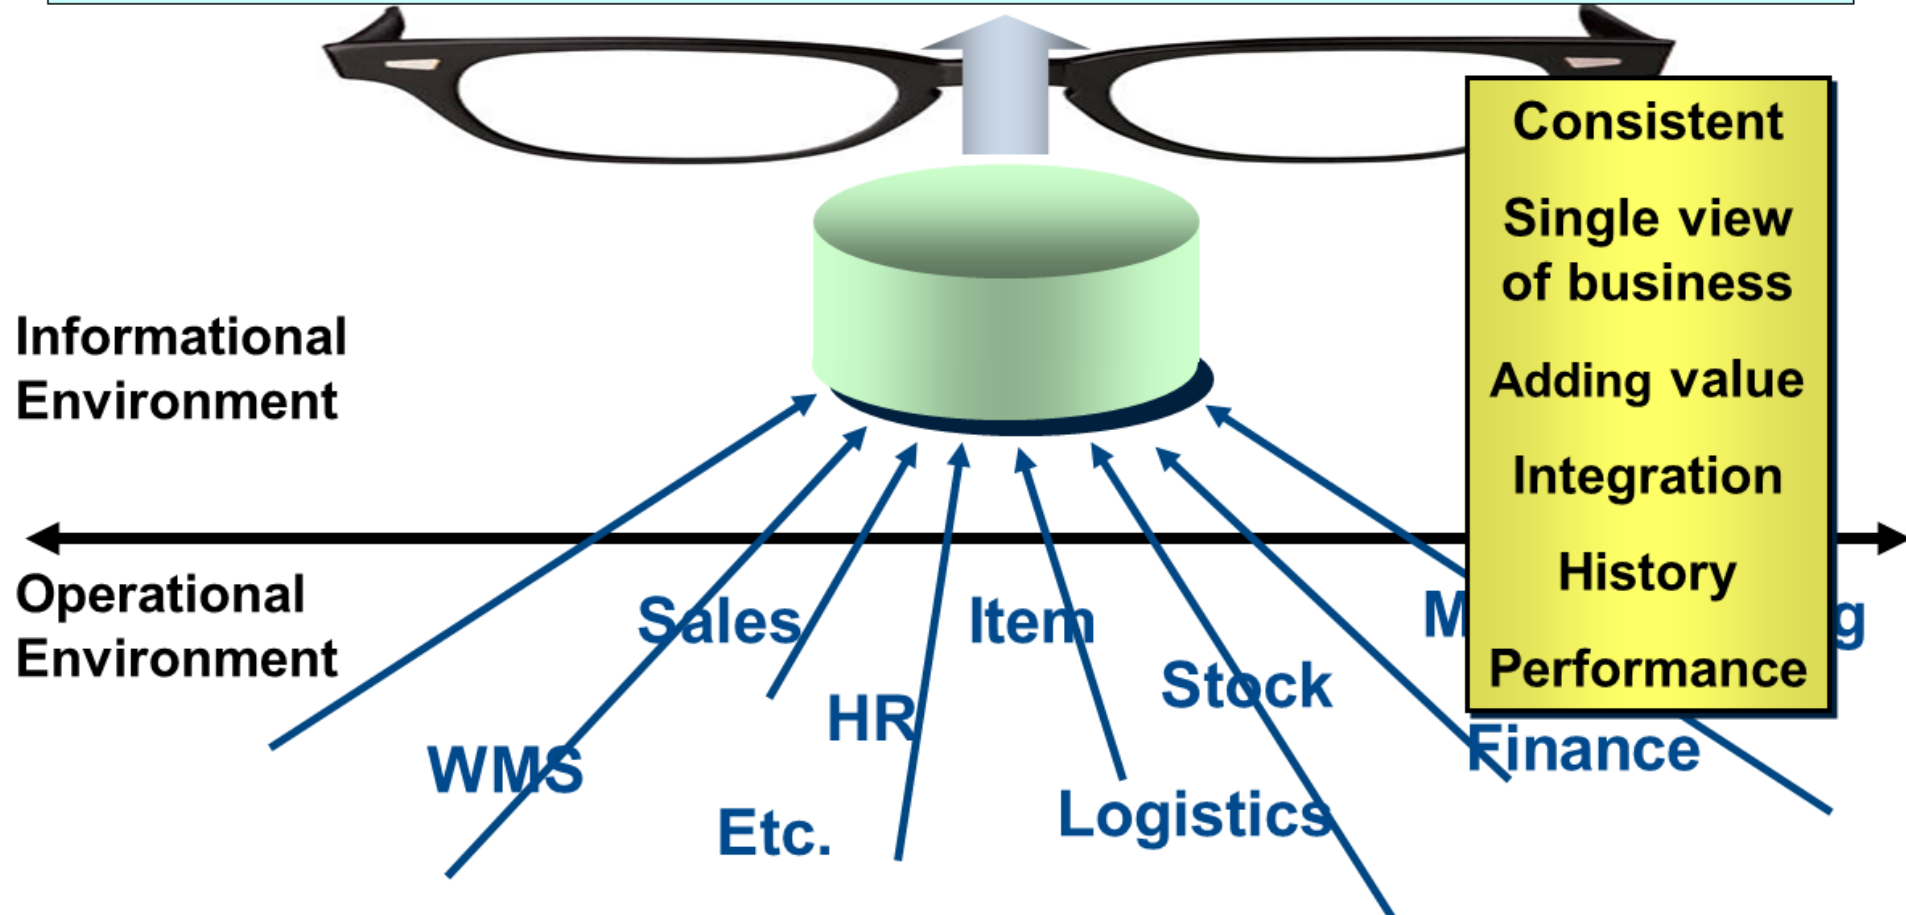

**Andrew McAfee (MIT)**

**PHILIPS**  
sense and simplicity

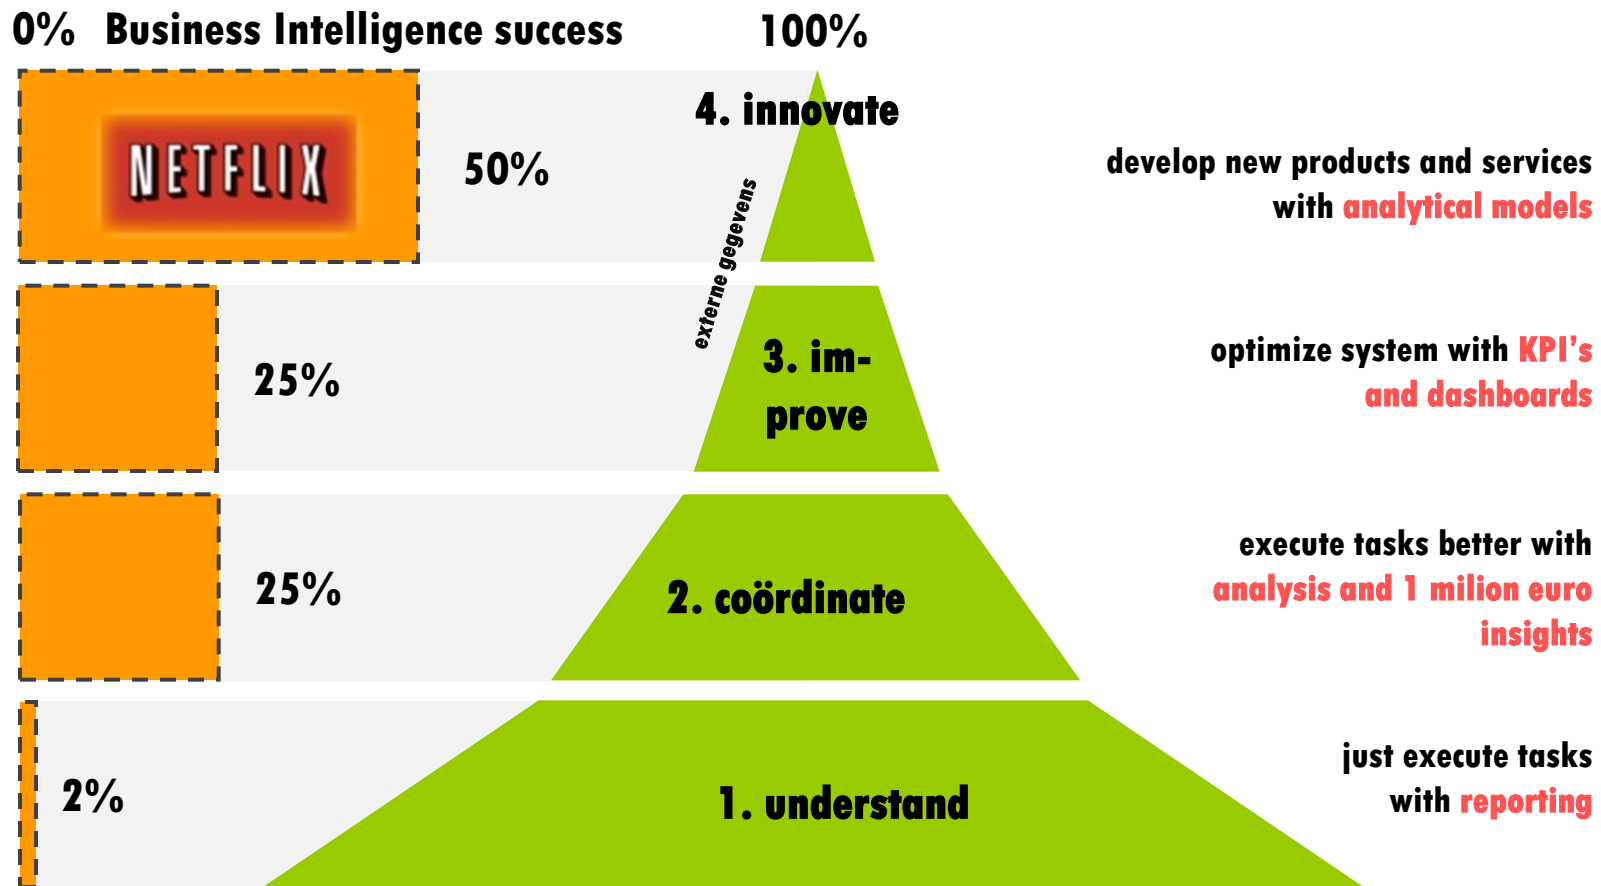

# Albert Heijn in 2000: stove-pipe BI solutions

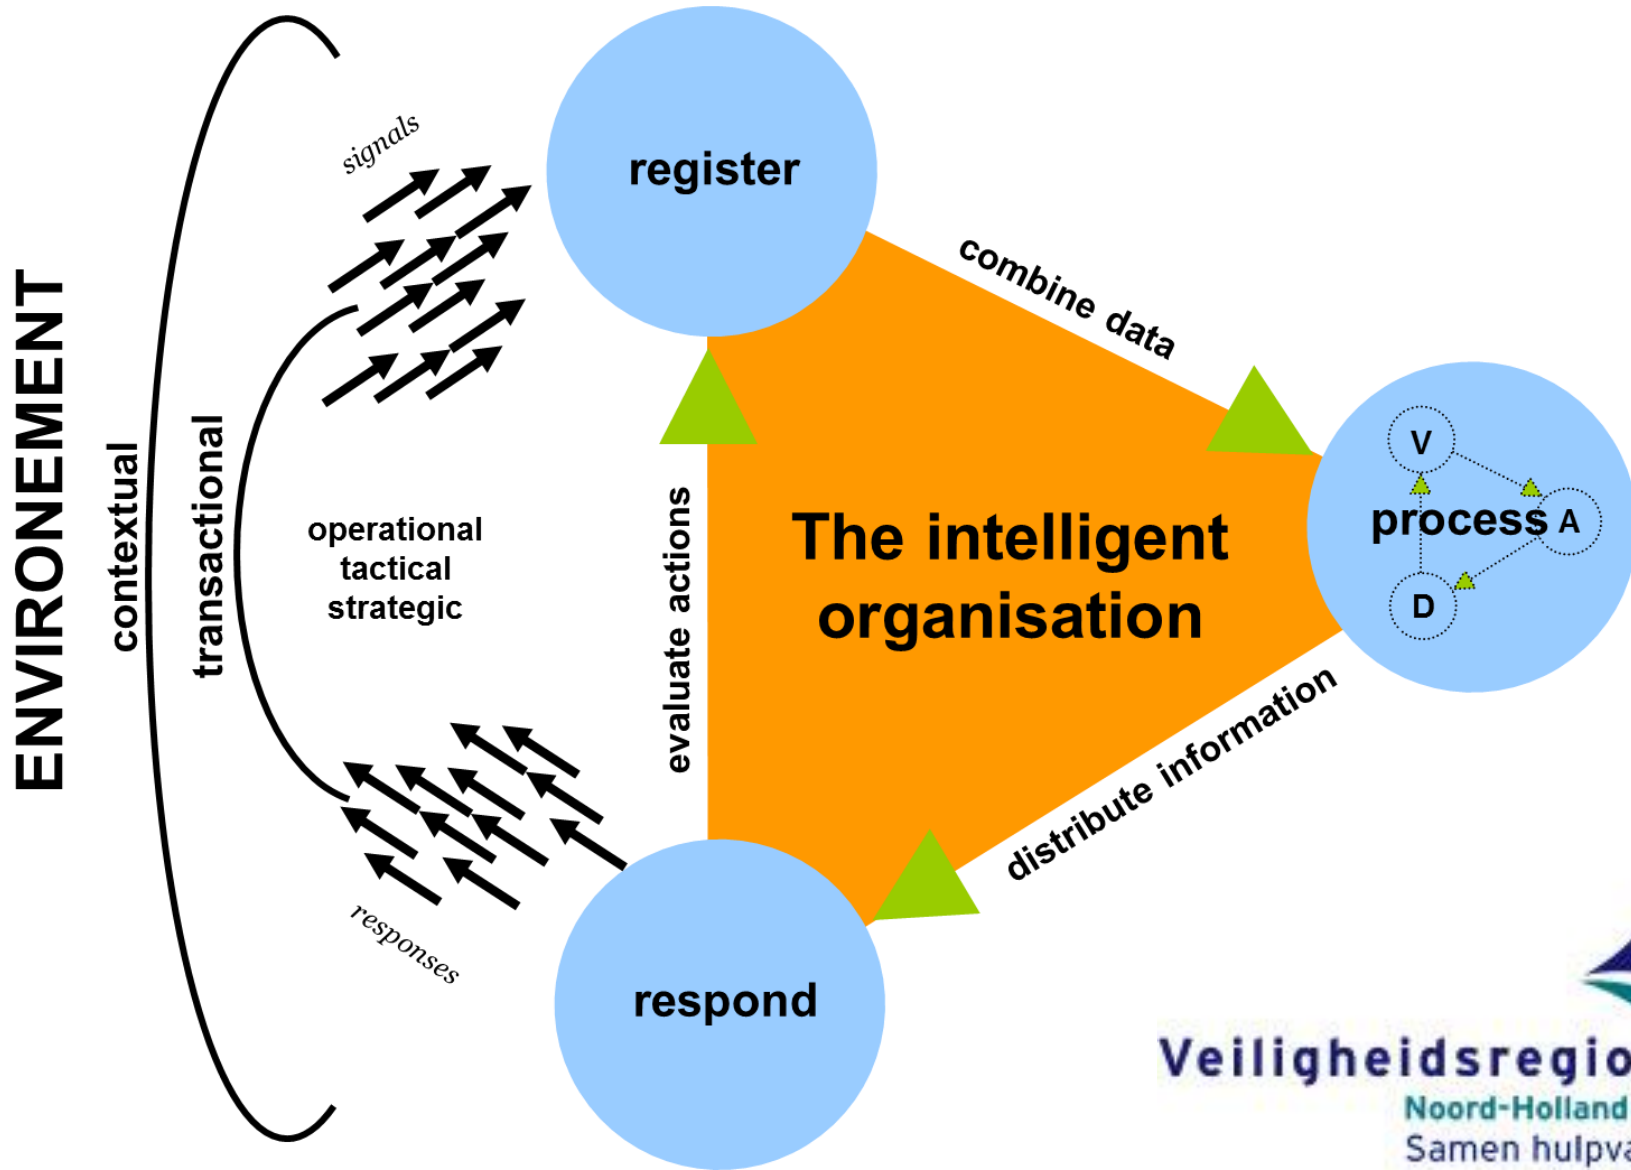

# Today: Pallas - Providing One Single Integrated View

**business processes**

In short, business intelligence is all about..

To point  
us in the  
right  
direction

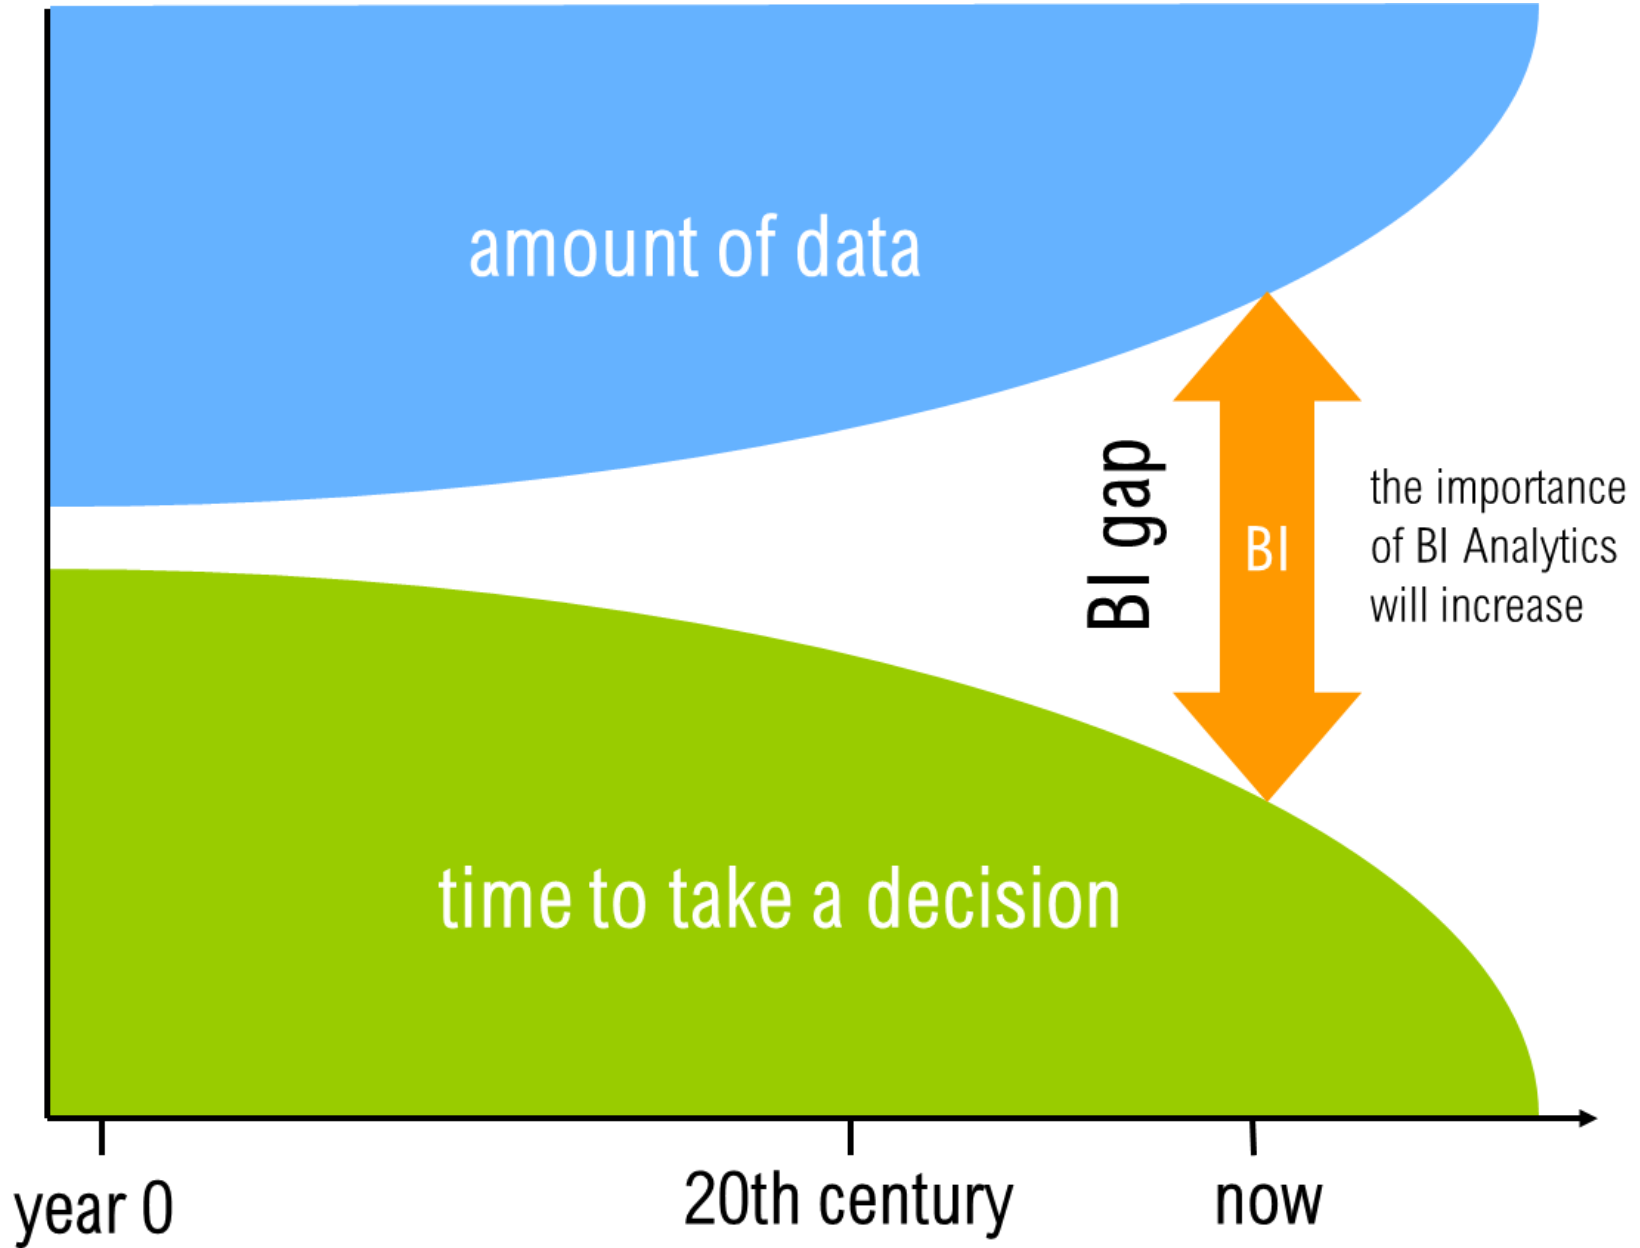

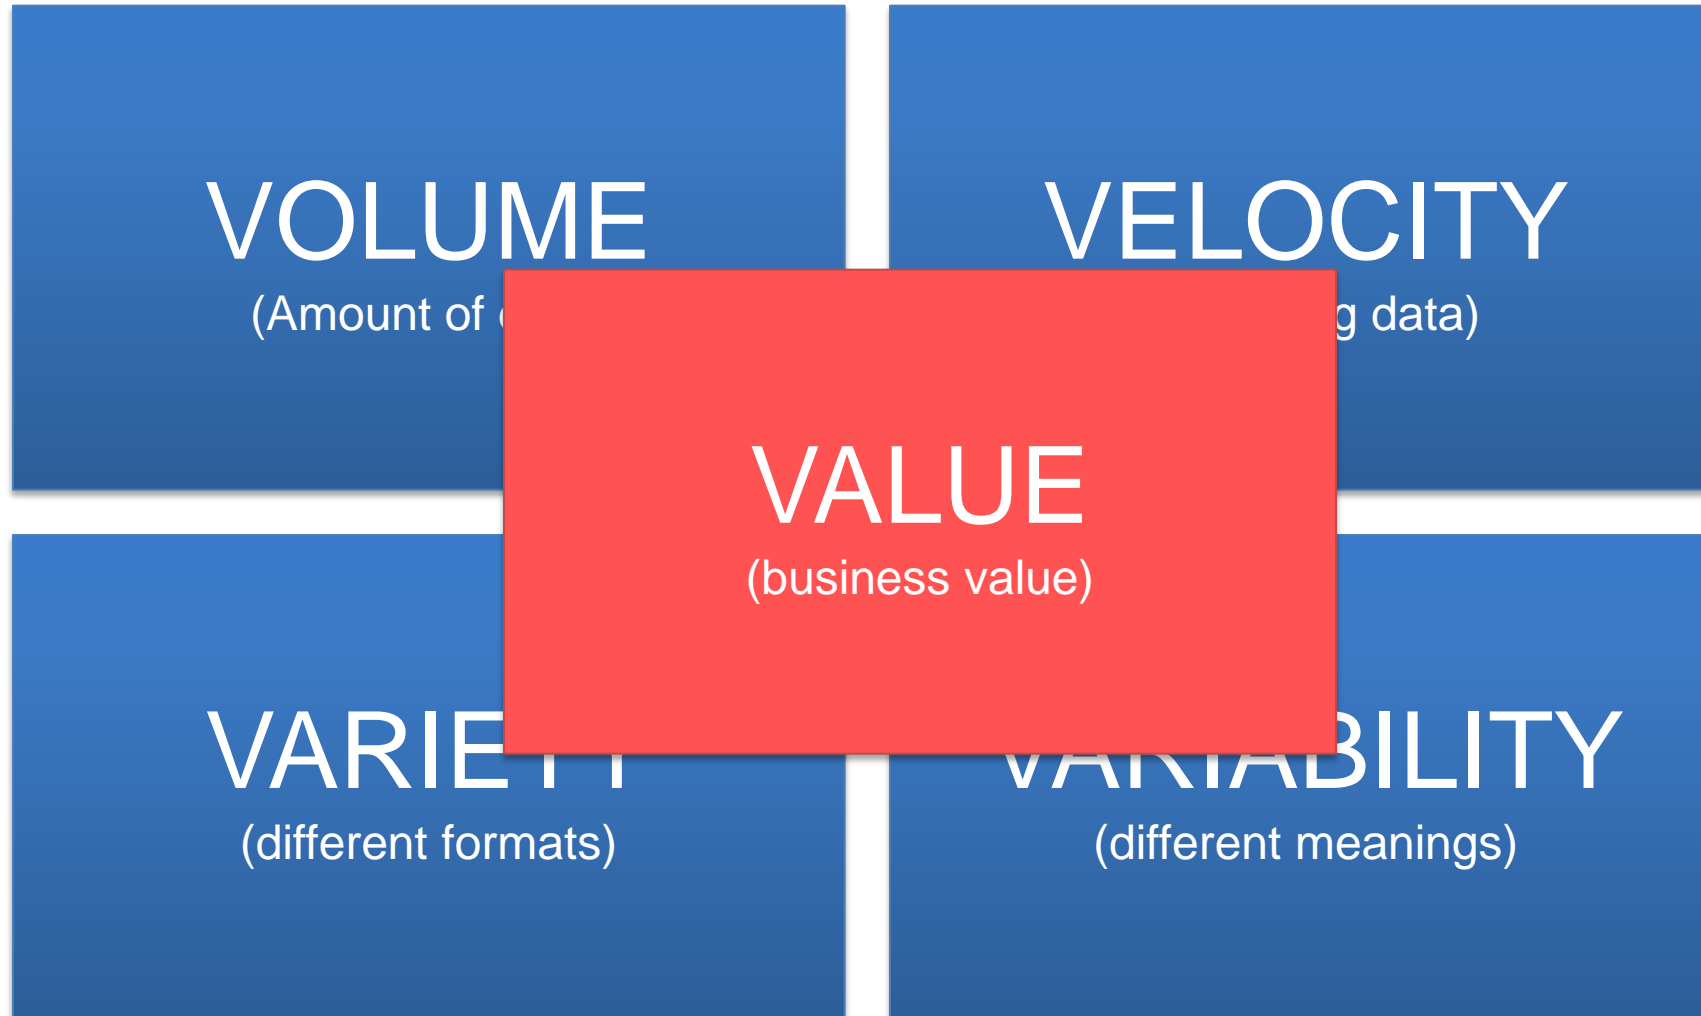

- ▶ **Near 2020 we will be surrounded by 26 billion devices that are connected (IoT).**
- ▶ **Each day 1,2 billion pictures are made and many of them are shared by social media. Photography will be the new universal language (Heiferman, 2013).**
- ▶ **Last 2 years more data is added to this iceberg than in the total history of mankind.**

# What is Big Data?

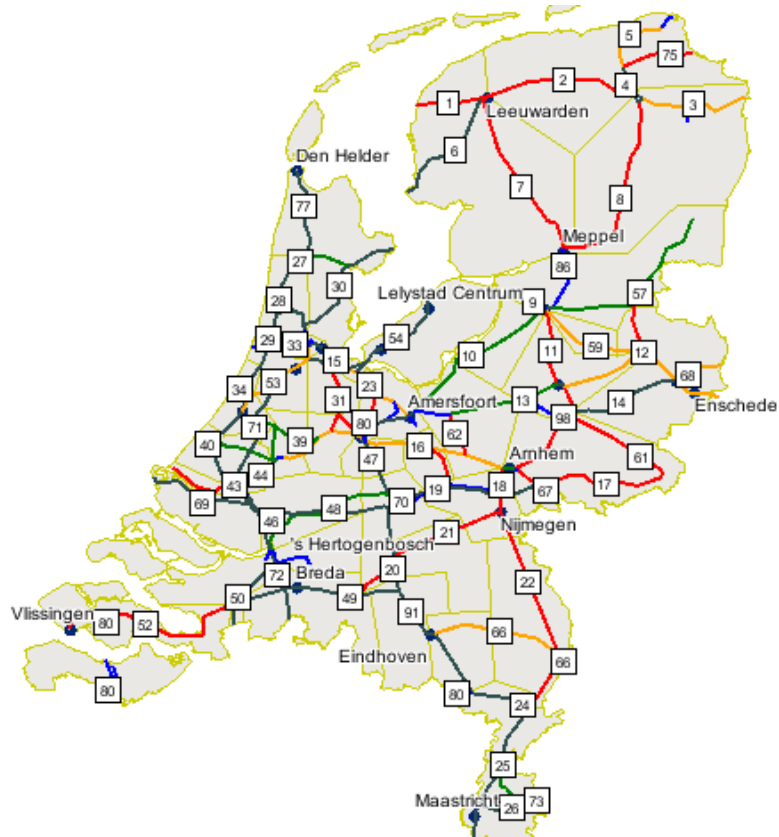

**And the value is:**

**DISRUPTION**

# typical application - 1

## ► Business Activity Monitoring - ProRail

Spoorlijn	Totaal
001 Harlingen Haven - Leeuwarden	97,103%

# Impact on jobs

- ▶ **90% workers and 10% thinkers at the start of the 20<sup>th</sup> century, now it's the other way around**
- ▶ **Even farmers have been put out of business soon**

This **tree** has 3,000 followers...do you?

**Cow** transmits 200 MB per year

Connected **shoe**

**Asthma inhaler** cross-referenced with environmental / weather data

**Proteus chip** transmits data from your stomach

COWS generate more data than most

out of business

VAN'

Wireless pH & temperature sensor

Local Interrogation 'on the spot' by farmer

## New York City Fights Fire with Data

Analytics help New York City firefighters track potential hot spots.

**Brian Heaton** | May 18, 2015

**“SAP Predictive Maintenance & Service can help organizations reduce downtime of machines in factories. Thanks to data from connected sensors it can predict where and when disturbances will take place. This allows technicians to schedule and perform maintenance work - even before the problems occur.”**

Over the next year, companies will spend an average of **\$8M** on big data-related initiatives.

Multiplied by the number of companies (est. 4,75 million worldwide\*) you will get a huge amount of dollars:

**\$ 1,000,000,000,000**

Hundred \$100 dollar bills

\$1 million dollars (100 packets of \$10,000)

\$100 million looks a little more respectable

**\$1 BILLION dollars**

Ladies and gentlemen... I  
give you \$1 trillion dollars...

**My humble opinion:**

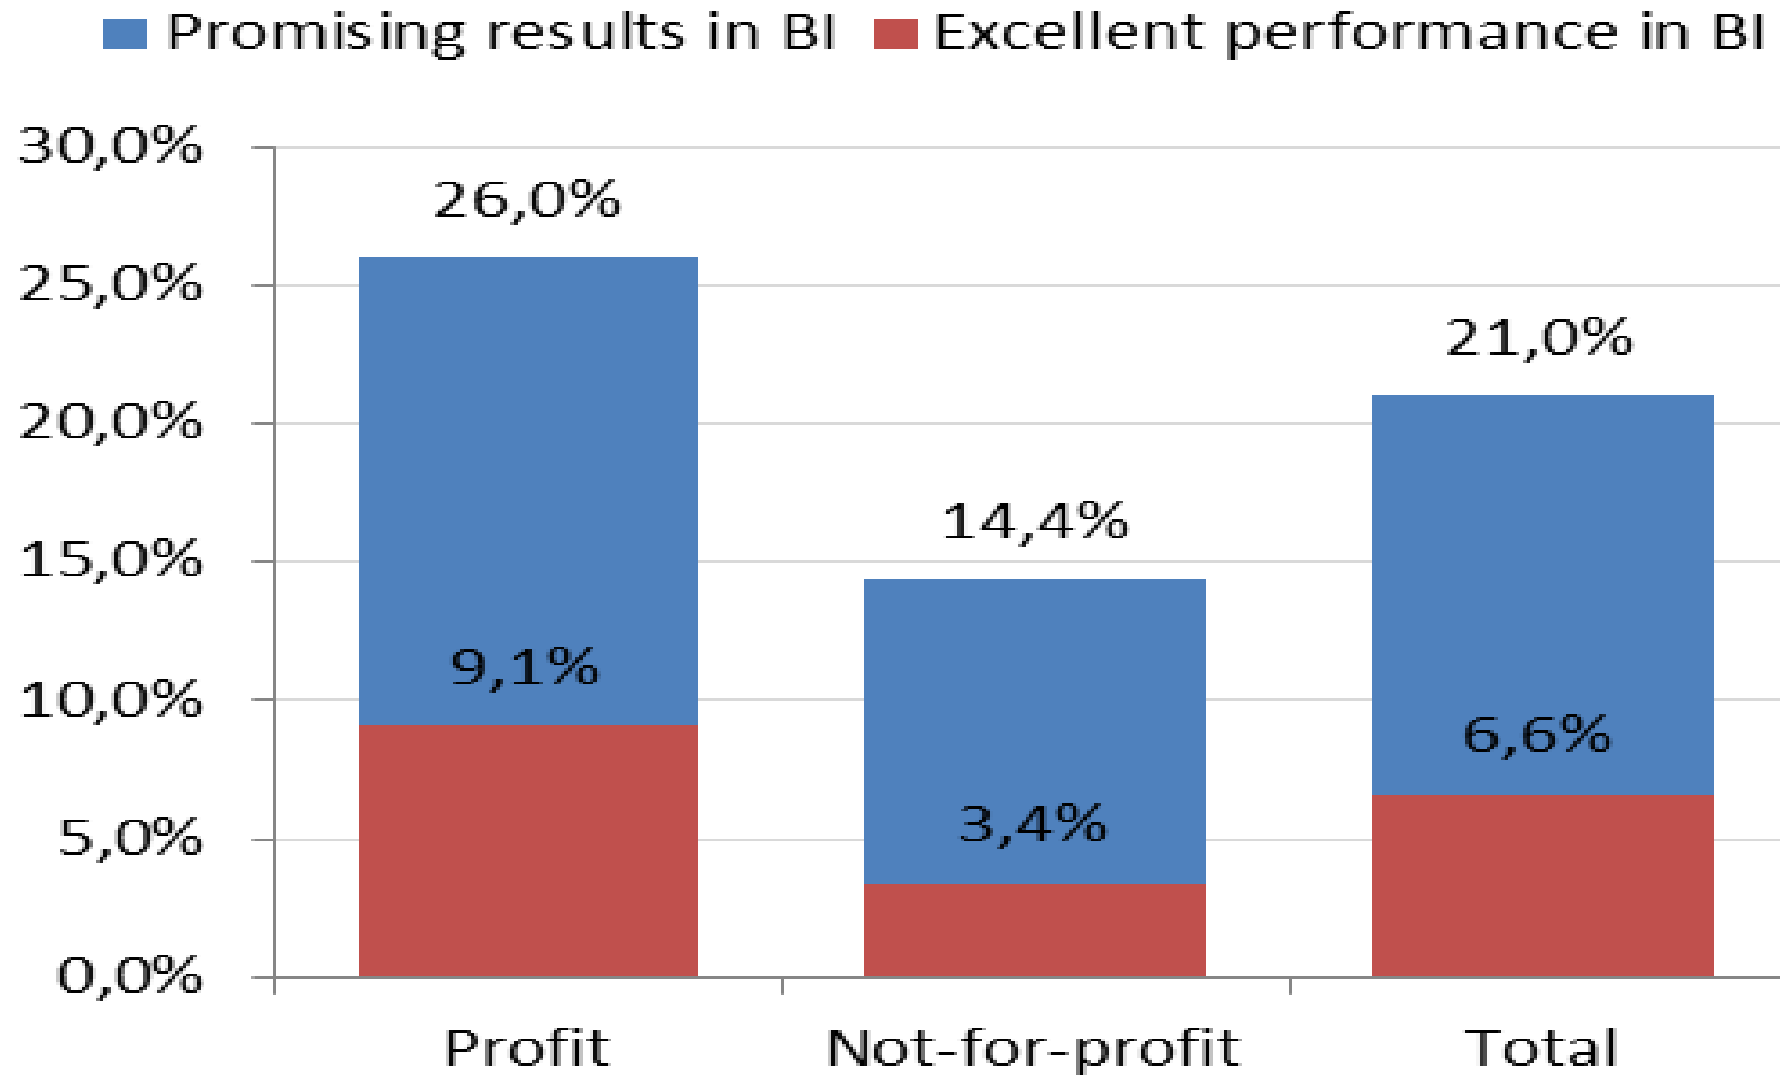

**Big Data equals Big Money!**

# One trillion dollars

**Ladies and gentlemen... 0,75 trillion dollars are going down the drain only in 2019...**

# Success and Business Intelligence & Big Data (1)

# Big Data Investments to Remain Strong

## Currently Investing

## Plans 1-3 Years

Q. In which of the following areas is your organization investing currently to fully leverage big data opportunities, and what are your organization's investment plans for the following areas over the next 1-3 years? BASE: Plans to deploy/implement big data projects.

Source: IDG Enterprise Big Data Study, 2014

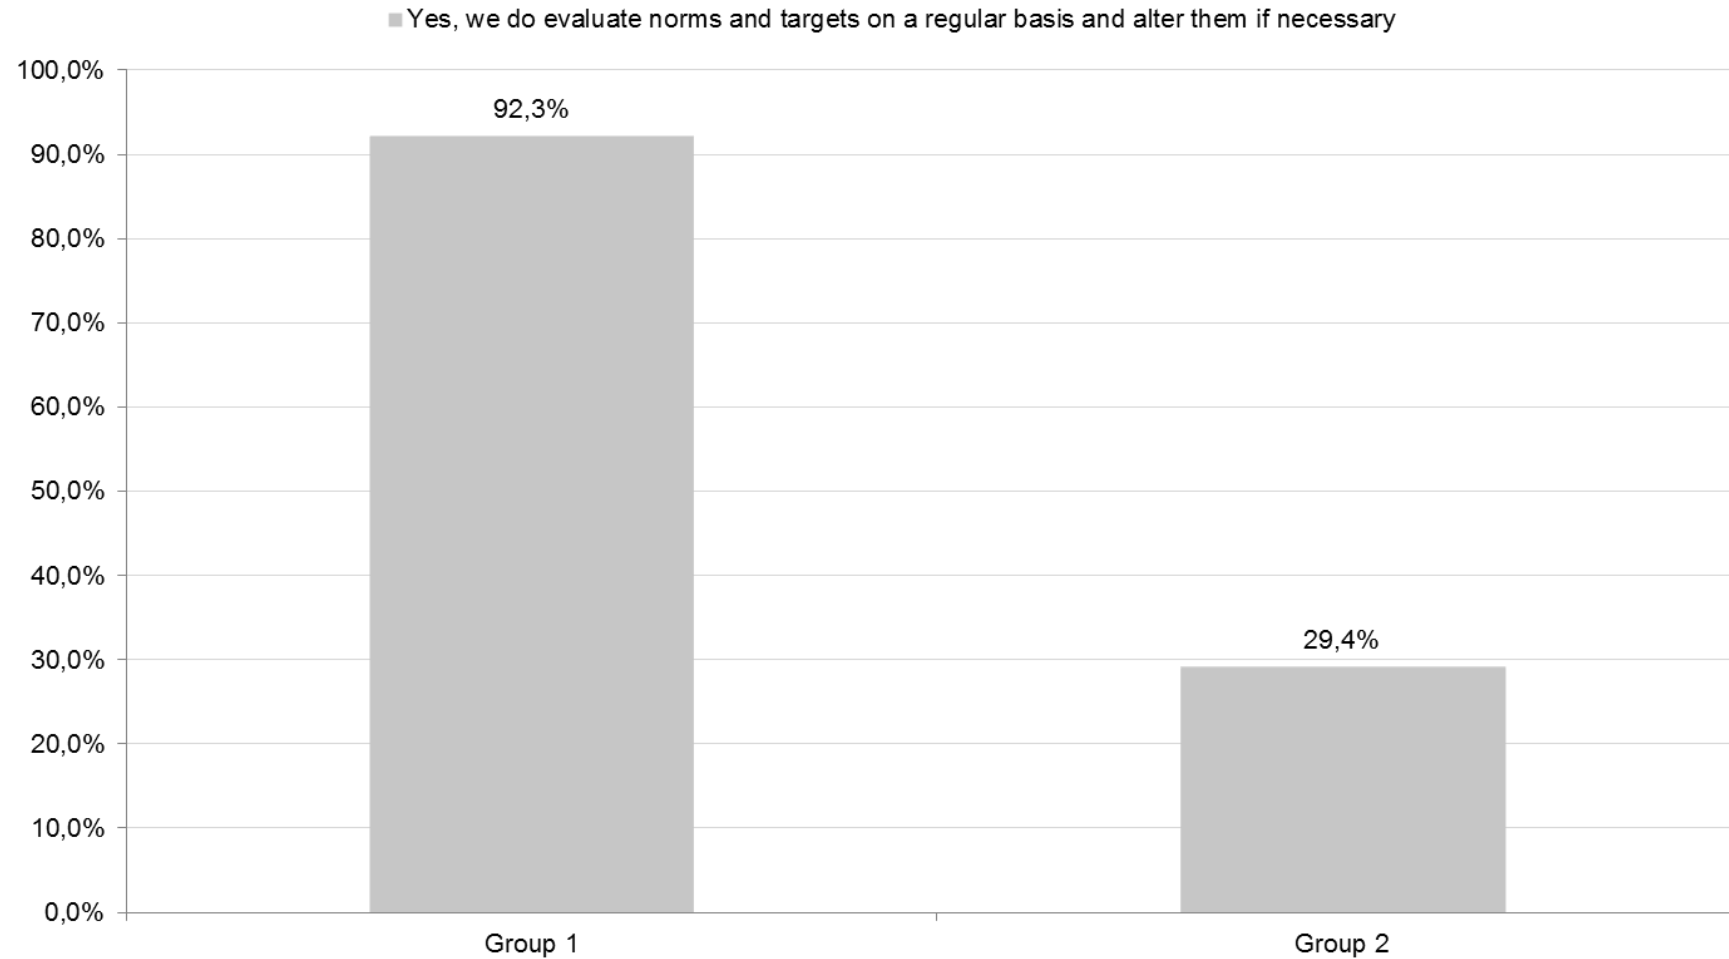

**How to turn your data into dollars**

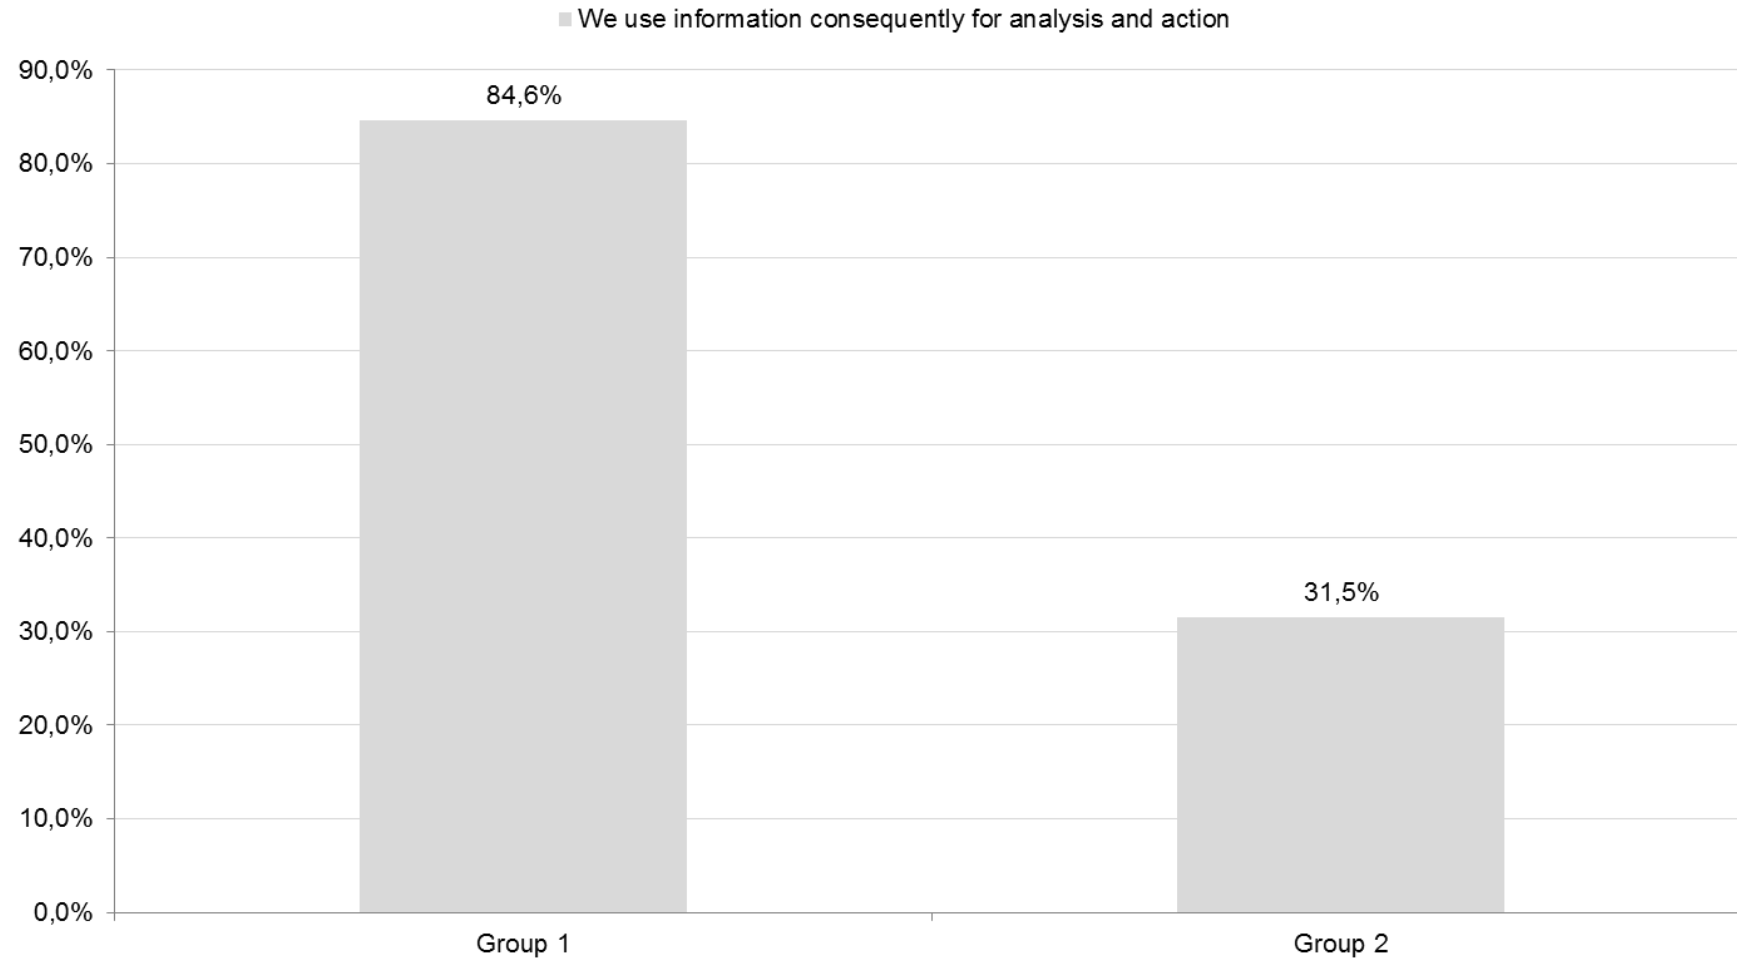

- ▶ **Dutch study among 389 organizations**
- ▶ **Looking for the most critical business intelligence success factors – two groups: best performers (group 1) versus bad & average performers (group 2)**
- ▶ **Questionnaire with 45 questions measuring almost 80 factors regarding the intelligence of businesses and not for profit organizations**

# Evaluating norms and targets regularly

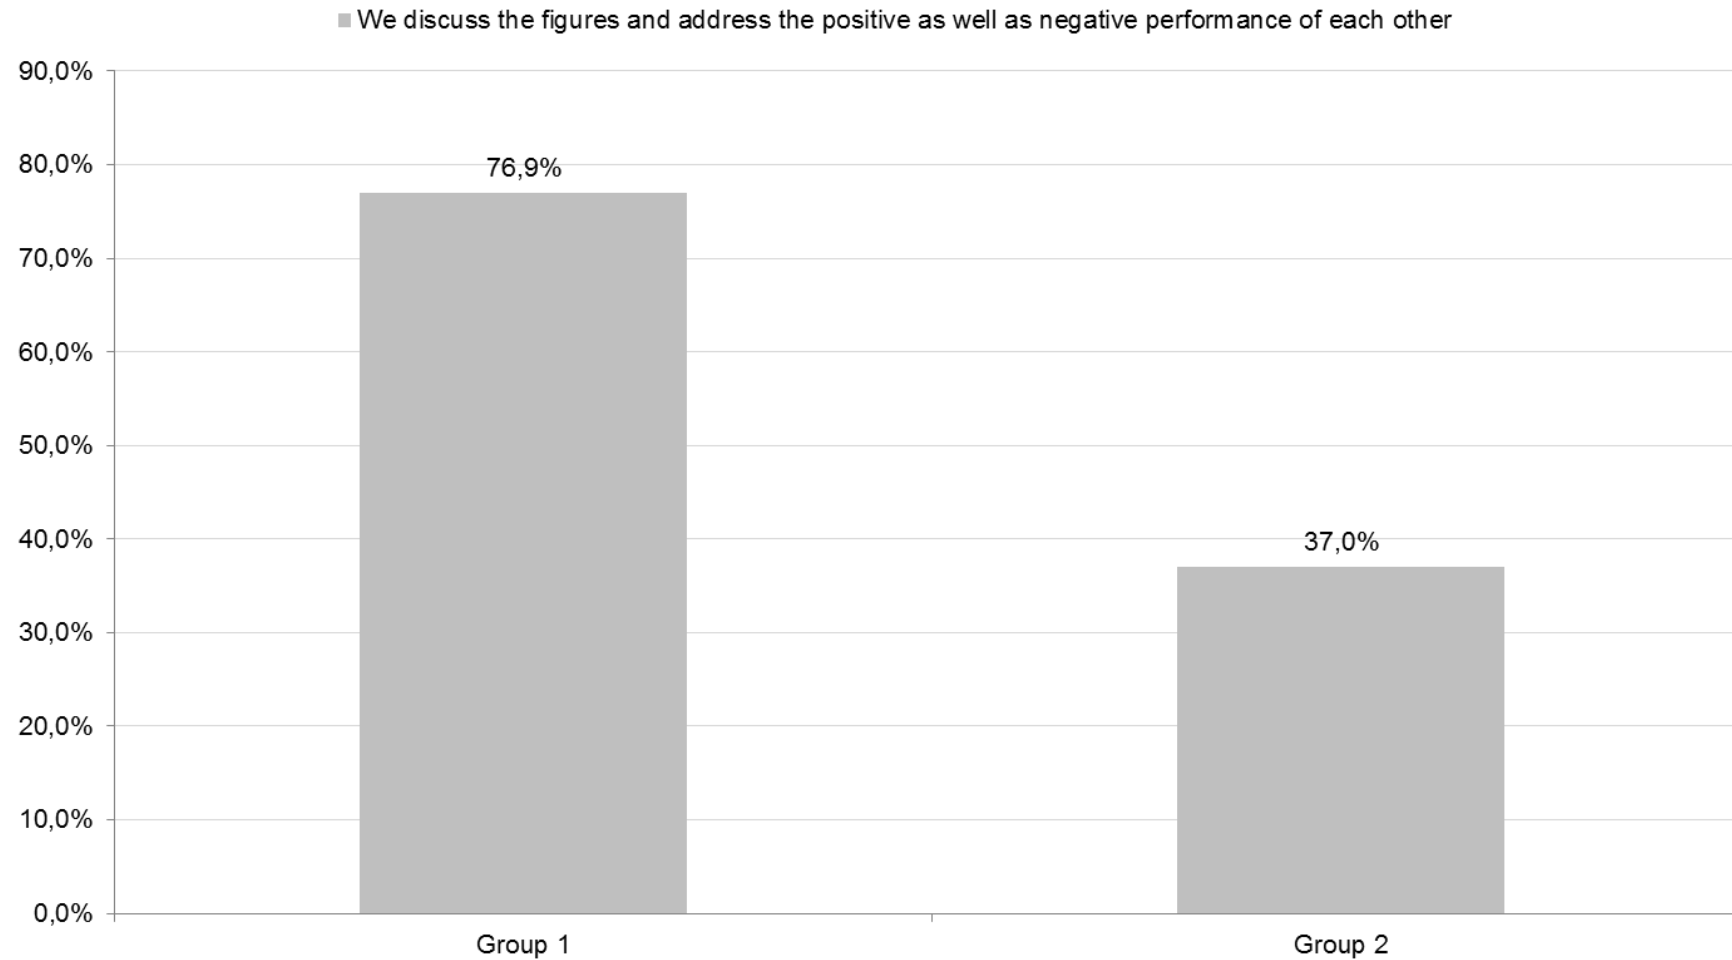

# Use information consequently for analysis and action

# Discuss figures and both positive and negative results

# Plan do check act – the holy grail of BI

# Use information consistently for analysis and action

Data warehouse  
**Topmanagement  
involved**

Use management models  
to develop the organization  
(balanced scorecard, INK,  
and so forth)

Share information with customers and  
suppliers

**Check performance  
and discuss negative  
& positive results**

## Evaluate and adjust norms and targets on a regular basis

One version of the truth

Focus on customer and  
process using CRM

**Fit between information and  
organizational roles**

OLAP

**Use information  
purposefully  
for innovation**

Management stimulates  
purposefully innovation

Competitive Intelligence

Reward everyone for better performance

**Technology makes BI efficient;  
the business users effective.**
